STORAGE AND DISPOSAL

KEEP AWAY FROM HEAT. SPARKS AND OPEN FLAMES.

Store in the closed, original container in a dry, cool, well ventilated area out of direct sunlight. Store in a locked room or place away from children, animals, food, feedstuffs, seed and fertilisers. Triple or preferably pressure rinse containers before disposal. Add rinsings to spray tank. Do not dispose of undiluted chemicals on site.

If recycling, replace cap and return clean containers to recycler or designated collection point.

If not recycling, break, crush, or puncture and bury empty containers in a local authority lanfill. If no landfill is available, bury the containers 500mm below the surface in a disposal pit specifically marked and set up for this purpose, clear of waterways. desirable vegetation and tree roots, in compliance with relevant Local. State or Territory government regulations. Empty containers and product should not be burnt.

SAFETY DIRECTIONS

Very dangerous, particularly the concentrate. Product and spray are poisonous if absorbed by skin contact, inhaled or swallowed. Attacks the eyes. Will irritate the nose, throat and skin. Repeated minor exposure may have a cumulative poisoning effect. Avoid contact with eyes, skin and clothing, DO NOT inhale vapour or spray mist. Protect eyes while

When opening the container and preparing spray, wear elbow length PVC gloves and face shield. When using the prepared spray wear cotton overalls buttoned to the neck and wrist and washable hat, elbow-length PVC gloves. impervious footwear and half face-piece respirator with combined dust and gas cartridge / canister. If clothing becomes contaminated with product or wet with spray, remove clothing immediately. If product or spray on skin, immediately wash area with soap and water. After use and before eating, drinking or smoking, wash hands, arms and face thoroughly with soap and water. After each day's use, wash gloves, face shield, respirator or face-piece and contaminated clothing. Wash rubber respirator with detergent and warm water.

If swallowed, splashed on skin or in eyes, or inhaled, contact a Poisons Information Centre. Phone Australia: 131 126 or a doctor at once. Remove any contaminated clothing and wash skin thoroughly. If swallowed, activated charcoal may be advised. Give Atropine if instructed.

Advice to Doctor

Methomyl is a reversible cholinesterase inhibitor. Atropine sulphate should be used for treatment, 1.2 to 2.0mg I.V. every 10 to 30 minutes until full atropinisation is achieved. Maintain full atropinisation until patient recovers.

DO NOT use morphine or 2-PAM. Artificial respiration or oxygen may be necessary. Allow no further exposure to cholinesterase inhibitors until recovery is assured.

SAFETY DATA SHEET (SDS)

Additional information is listed in the SDS. which is available from the supplier.

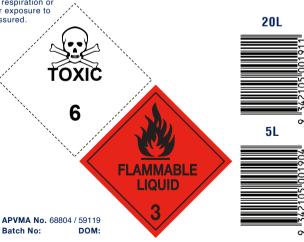

GHS Statements

Highly flammable liquid and vapour. Toxic if swallowed, in contact with skin or if inhaled. Causes serious eve damage. Causes damage to organs if inhaled, in contact with skin and if swallowed.

IN A TRANSPORT EMERGENCY **DIAL 000** POLICE or FIRE BRIGADE

| | Long-tailed Mealy Bug | SA & WA only | Dilute spraying 200ml / 100L water | 2 (H) | Apply in August or late November to early December when fruit is absent and young mealy bug are present. Treatment will prevent mealy bug attacking under the fruit calyx. |
| | Light Brown Apple Moth | NSW & SA, WA only | | | Apply in late November to early Decemeber when fruit is absent to prevent light brown apple moth attacking under the fruit calyx. |
| | Bronze Orange Bug, Spined Citrus Bug | QLD, VIC, SA & WA only | Dilute spraying 25ml / 100L water | | Apply as populations indicate and before bugs reach the adult winged stage. |
| | Heliothis | | Dilute spraying 200ml / 100L | | Spray only if heavy infestations occur on young foliage and fruit. |
| | Large Citrus Butterfly, Small Citrus Butterfly | | water | | Apply to cover unhardened leaves from recent growth flushes when infestations are rooted in young trees only. |
| Cowpeas | Heliothis | NSW, SA & WA only | 500ml OR 1L / ha | 7 (H) | Ovicide: Apply as detailed for adzuki beans above. |
| | | | 1.5L OR 2L / ha | | Larvicide: Apply as detailed for adzuki beans above. |
| | Green Vegetable Bug | | 1.5L / ha | | Apply when infestation reaches an economically damaging level and repeat if necessary. |
| | | | | | |

| CROP | PEST | STATE | RATE | WHP (DAYS) H=HARVEST G=GRAZING | CRITICAL COMMENTS |
|----------|------------------------|-----------------------|---|--|---|
| Cotton | Heliothis | QLD, NSW & WA only | 500ml 0R 1L/ha | Nil (H) DO NOT graze or feed treated crops to animals | Avoid contact with spray residue. Keep unprotected persons out of treated areas for at least 24hrs. Ovicide / Larvicide: Check crops every 2-3 days for egg and larval numbers. Pre-squaring: Initiate sprays when significant number of eggs are present, i.e. 75 eggs per 100 plants. Continue at 4-5 day intervals while egg numbers are above these levels and larvae control is adequate. Add an effective larvicide at registered rates if significant numbers of small larvae (20 per 100 plants) are present. Squaring: Boll maturing: Continue above schedule when 50 eggs or more per 100 plant terminals are found. Add an effective larvicide at registered rates if significant numbers of small larvae (10 per 100 terminals) are present. If large larvae survive or if Heliothis armigera becomes predominant, use higher rates or add other effective larvicides. Refer to appropriate larvicide labels for directions for use. Use higher rate at peak egg laying and when 1 st to 2nd instar larvae predominate. Good spray coverage is essential to assure good ovicidal activity. NOTE: Methomyl may cause reddening of foliage. If excessive, discontinue use. |
| | Heliothis | QLD, NSW & WA only | 1.8L to 2.4L / ha | | Larvicide: Apply as an occassional treatment in a spray programme based on alternative insecticides. |
| | Loopers | QLD & WA only | 1.8L to 2.4L / ha | | Do not use more often than every 14 days during active growth stages of the crop or alternatively apply up to 3 treatments at minimum of 3 day intervals between treatments after the boll load is set. Do not use during periods of plant stress. NOTE: Methomyl may cause reddening of foliage. If excessive, discontinue use. |
| Duboisia | Cluster Caterpillar | QLD & WA only | 100ml / 100L OR 1.5L / ha | | Apply when pests first appear. Repeat depending on infestation. |
| Ginger | Heliothis | QLD & WA only | 150ml / 100L OR 1.5L / ha | | Apply when damage is evident to young shoots at ground level. |

| CROP | PEST | STATE | RATE | WHP (DAYS) H=HARVEST G=GRAZING | CRITICAL COMMENTS | | |
|---|--|--|---|---|--|--|--|
| Grapevines / Grapes | | | | | | | |
| | Light Brown Apple Moth, Vine Moth | All States | Dilute spraying 150ml / 100L water | 7 (H) | Apply during early shoot growth / flowering if pests are a problem and again just before bunches close, if required. Control at later stages is difficult. | | |
| Guar | Green Vegetable Bug, Pod Sucking Bug | QLD & WA only | 2L / ha | 7 (H) | Apply when significant populations are noted. | | |
| Hops | Heliothis | VIC, TAS & WA only | 2L / ha | 14 (H) DO NOT graze treated crop | Apply when pests first appear. Repeat depending on infestation. For high volume spraying, use at least 1000L / ha of spray mixture. DO NOT use chemicals from the same group for consecutive sprays. | | |
| Lentils | Heliothis | QLD, NSW & WA only | 1.5L to 2L / ha | 7 (H) | Examine crops at least twice weekly during flowering, podding for caterpillars and their damage. Use the higher rate if infestation is heavy. | | |
| Linseed | Heliothis | QLD & WA only | 1.5L OR 2L / ha | 7 (H) | Apply from early flowering and repeat depending on infestation. Larvae completely enclosed inside bolls may not be controlled. Use high rate for heavier infestations. | | |
| Lucerne (Forage, Hay and Seed) | | QLD, NSW, VIC, SA, TAS & NT only | 1.5L to 2L / ha | 3 (G) | Apply when pests first appear. Repeat depending on infestation. Use higher rate on heavier infestations. | | |

Cotton, Hops and crops not otherwise specified above: DO NOT GRAZE OR FEED CROPS TO ANIMALS.

GENERAL INSTRUCTIONS

KDPC Metho Insecticide is a water miscible liquid to be dissolved in water for spray application It is most effective when spray schedules are initiated on young insects. The lower rates are used on small larvae and light infestations, the higher rates on larger larvae and heavy infestations.

USE OF WETTING AGENT

ALWAYS add a non-ionic agricultural wetting agent such as Kendon Kendral 600 at a rate of 25ml / 100L of spray solution.

INSECTICIDE RESISTANCE WARNING

GROUP 1A INSECTICIDE

For insecticide resistance management KDPC Metho Insecticide is a Group 1A insecticide. Some naturally occurring insect biotypes resistant to KDPC Metho Insecticide and other Group 1A insecticides may exist through normal genetic variability in any insect population. The resistant individuals can eventually dominate the insect population if KDPC Metho Insecticide or other Group 1A insecticides are used repeatedly. The effectiveness of KDPC Metho Insecticide on resistant individuals could be significantly reduced. Since the occurrance of resistant individuals is difficult to detect prior to use. KD Plant Care Pty Ltd accepts no liability for any losses that may result from the failure of this product to control resistant insects. KDPC Metho Insecticide may be subject to specific resistance management strategies. For further information contact your local supplier, KD Plant Care Pty Ltd representative or local agricultural department agronomist.

Export of Treated Produce

Growers should note that suitable MRL's or import tolerances may not be established in all markets for produce treated with KDPC Metho Insecticide. If you are growing produce for export, please check with KD Plant Care Pty Ltd for the latest information on MRL's and import tolerances BEFORE using KDPC Metho Insecticide.

Fill spray tank ¼ to ½ full of water. Start agitation (using mechanical or hydraulic means, NOT air agitation), add required quantity of KDPC Metho Insecticide and continue filling with water. Add non-ioninc wetting agents as recommended previously. Continue agitation for several minutes prior to spraying to ensure thorough mixing.

Application

Apply when wind velocity is low, to avoid drift. DO NOT apply as a fog or mist. Proper timing and good coverage is essential for effective insect control.

Application Cont...

Larvicidal: Apply at the recommended rates when the insects first appear and repeat as needed Apply the lower rates on small caterpillars and light infestations of insects. Use the higher rates on larger caterpillars and heavier infestations. Best control is obtained when spray schedules are initiated on

Ovicidal / Larvicidal: Use these rates only where crops are regularly monitored for eggs and larvae. Use the lower rate when eggs are present. Use the higher rate when heavy egg lays occur and / or when first to second instar are present (up to 5mm long). If large larvae are present (longer than 5mm), use the larvicide rates as recommended. This product may be used at ovicidal / larvicidal rates in conjunction with other recommended larvicides used to control other insects.

Ground Application

Apply as a coarse spray with low pressure ground equipment. Use sufficient water to obtain thorough, uniform coverage

Special Instructions for Tree Crops / Vines

- Dilute Spraying
- Use a sprayer designed to apply high volumes of water up to the point of run-off and matched to the crop being sprayed.
- Set up and operate the sprayer to achieve even coverage throughout the crop canopy. Apply sufficient water to cover the crop to the point of run-off. Avoid excessive run-off.
- The required water volume may be determined by applying different test volumes, using different settings on the sprayer, from industry guidelines or expert advice.
- Add the amount of product specified in the Directions For Use table for each 100L of water. Spray to the point of run-off.
- The required dilute spray volume will change and the sprayer set-up and operation may also need to be changed as the crop grows.

- Use a sprayer designed and set up for concentrate spraying (that is, a sprayer which applies water volumes less than those required to reach the point of run-off), and matched to the crop being sprayed.
- Set up and operate the sprayer to achieve even coverage throughout the crop canopy using your chosen water volume.
- Determine an appropriate dilute spray volume (see *Dilute Spraying* above) for the crop canopy.
- This is needed to calculate the concentrate mixing rate. The mixing rate for concentrate spraying can then be calculated in the following way:

EXAMPLE ONLY

- Dilute spray volume as determined above: For example 1500L / ha. Your chosen concentrate spray volume: For example 500L / ha
- The concentration factor in this example is $3 \times (i.e. 1500L \div 500L = 3)$.
- If the dilute label rate is 10ml / 100L, then the concentrate rate becomes 3 x 10, that is,
- The chosen spray volume, amount of product per 100L of water, and the sprayer set up and operation may need to be changed as the crop grows.
- For further information on concentrate spraying, users are advised to consult relevant industry guidelines, undertake appropriate competency training and follow industry Best Practices.

For Cotton, Soybeans, Sorghum, Mung beans, Sunflowers, Pastures, Inter cereals and Linseed only: DO NOT use less than 22L / ha water and increase the spray volume according to density of crop and pest pressure. Turn off spray boom while passing over creeks or dams.

This product can be mixed in the spray tank with Larvin @ 375.

As the formulations of other manufacturers products are beyond the control of KD Plant Care Pty Ltd, all mixtures should be tested prior to mixing commercial quantities.

PRECAUTION

Keep unprotected persons and animals out of operational areas during treatment and while there is a danger of drift. Avoid contact with spray residues.

Re-Entry Period

Do not allow entry into treated areas for at least 24 hours after treatment. When prior entry is necessary. wear cotton overalls buttoned to the neck and wrist (or equivalent clothing), a washable hat and elbow length PVC gloves. Clothing must be laundered after each days use.

PROTECTION OF CROPS, NATIVE AND OTHER NON-TARGET PLANTS

DO NOT apply under weather conditions, or from spraying equipment, that may cause spray to drift onto nearby susceptible plants / crops, cropping lands or pastures. Avoid drift by applying when wind velocity

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT

Dangerous to birds, fish, stock and wildlife. Birds feeding on treated areas may be killed Dangerous to bees. **DO NOT** spray any plants in flower while bees are foraging. Ensure beehives are removed from the area to be treated and from adjacent paddocks. DO NOT contaminate streams, rivers or waterways with the chemical or used containers. DO NOT re-use container

STORAGE AND DISPOSAL

KEEP AWAY FROM HEAT, SPARKS AND OPEN FLAMES Store in the closed, original container in a dry, cool, well ventillated area out of direct sunlight. Store in a

locked place away from children, animals, food, feedstuffs, seed and fertilisers. Triple-or preferably pressure rinse containers before disposal. Add rinsings to spray tank. Do not dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush, or puncture and deliver empty packaging to an approved waste management facility. If an approved waste management facility is not available, bury the empty packaging 500mm below the surface in a disposal pit specifically marked and set up for this purpose, clear of waterways, desirable vegetation and tree roots, in compliance with relevant local, state or territory government regulations. Do not burn empty containers or product.

SAFETY DIRECTIONS

Very dangerous, particularly the concentrate. Product and spray are poisonous if absorbed by skin contact, inhaled or swallowed. Attacks the eyes. Will irritate the nose, throat and skin. Repeated minor exposure may have a cumulative poisoning effect. Avoid contact with eyes, skin and clothing. Do not inhale vapour or spray mist. Protect eyes while using. When opening the container and preparing spray, wear elbow length PVC gloves and a face shield. When using the prepared spray wear cotton overalls buttoned to the neck and wrist and washable hat, elbow length PVC gloves, impervious footwear and half face-piece respirator with combined dust and gas cartridge / canister. If clothing becomes contaminated with product or wet with spray, remove clothing immediately. If product or spray on skin, immediately wash area with soap and water. After use and before eating, drinking or smoking, wash hands, arms and face thoroughly with soap and water. After each days use, wash gloves, face shield, respirator or face-piece and contaminated clothing. Wash rubber respirator with detergent and warm

FIRST AID

If swallowed, splashed on skin or in eyes, or inhaled, contact a Poisons Information Centre (Phone Australia 131 126) or a doctor at once. Remove any contaminated clothing and wash skin thoroughly. If swallowed, activated charcoal may be advised. Give atropine if instructed.

Advice to Doctor

Methomyl is a reversible cholinesterase inhibitor. Atropine sulphate should be used for treatment, 1.2mg to 2.0mg intravenously every 10 to 30 minutes until full atropinisation is achieved. Maintain full opinisation until patient recovers

DO NOT use morphine or 2-PAM. Artificial respiration or oxygen may be necessary. Allow no further exposure to any cholinesterase inhibitors until recovery is assured

SAFETY DATA SHEET

Additional information is listed in the Safety Data Sheet (SDS), which can be obtained from the supplier.

CONDITIONS OF SALE

The product as supplied is of high grade and believed to be suitable for any purpose for which it is expressly supplied and must be used in accordance with the directions for use given on this label. No responsibility is accepted in respect of this product, save those non excludable conditions implied by the Trade Practices Act or any applicable State Legislation.

GHS Statements

Highly flammable liquid and vapour. Toxic if swallowed, in contact with skin or if inhaled. Causes serious eye damage. Cause damage to organs if inhaled, in contact with skin and if swallowed. Toxic to aquatic life with long lasting effects.
